PROFILE

Recent Master's graduate in Cybersecurity (June 2026) with a Bachelor's in Software Development and Mobile Platforms (June 2025). Through academic projects and internships, I have gained practical experience in backend development, Azure IAM, RBAC, REST APIs, database design, and agile teamwork. I am interested in roles within software development, IT security, cloud security, and data analysis where I can contribute with my structured approach and technical curiosity.

TECHNICAL SKILLS

Programming Languages: Python, SQL, C++, Java(basic), JavaScript, Bash

Cloud & Tools: Docker, Git, Linux, Azure (Entra ID, Key Vault)

Backend & API: REST APIs, Node.js/Express, API authentication, FastAPI (basic)

Databases: PostgreSQL, SQLite, database design, normalization, complex queries

Methodologies: Agile/Scrum, documentation, structured problem-solving

WORK EXPERIENCE & PROJECTS

Backend Developer – Student Project with Husqvarna Group

Mar 2025 – Jun 2025

Collaborative project with Husqvarna

AWS, Docker, REST APIs, PostgreSQL

- Participated in database schema design and REST API development for a student project in collaboration with Husqvarna Group.
- Gained practical experience deploying services on AWS EC2 using Docker containers.
- Worked with AWS Cognito for user authentication and AWS S3 for file storage integration.
- Contributed to the final technical presentation delivered to Husqvarna's development team.

Product Owner – Web Application (Student Project)

Aug 2024 – Nov 2024

Agile development project in collaboration with Knowit

Scrum, Backlog Management, Stakeholder Presentation

- Served as Product Owner responsible for backlog prioritization and sprint planning for a development team.
- Coordinated integration between teams and contributed to managing technical debt.
- Prepared and led demo presentations for stakeholders, communicating progress and gathering feedback.

Developer / Tester (Internship)

Mar 2023 – Jun 2023

Sweco

Jönköping, Sweden

- Internship in an agile team focusing on testing and development tasks.
- Gained experience with version control (Git) and sprint-based work.

Part-time Support Assistant

Aug 2022 – Jun 2025

Gothenburg City

Gothenburg, Sweden

- Worked according to structured routines with documentation, responsibility, and communication in healthcare-related operations.

ACADEMIC PROJECTS

Master's Thesis: Comparative Evaluation of Open-Source SOAR Tools

Feb 2026 – Jun 2026

Research project with FortiGate integration

SOAR, Python, Data Analysis, Security Automation

- Designed a hybrid security architecture combining FortiGate NGFW and T-Pot honeypot to generate 14+ days of real attack data.
- Built identical log ingestion pipelines for controlled comparison of Shuffle and Wazuh+Cortex+TheHive.
- Developed Python scripts for metrics calculation and comparative analysis.
- Completed June 2026.

Bachelor's Thesis: AI-Powered Occupancy Estimation System

Jan 2025 – Jun 2025

Computer vision system with privacy focus

Python, YOLO, OpenCV, Intel RealSense, Data Analysis

- Developed a real-time system fusing RGB, depth, and IR camera data to count people while preserving privacy.

- Applied and fine-tuned YOLO-based deep learning models for person detection.
- Collected and analyzed one week of sensor data to identify usage patterns and optimize performance.

Azure IAM Implementation: Enterprise Security Controls

Sep 2025 – Feb 2026
Azure AD, RBAC, MFA, Key Vault

Identity and Access Management in cloud environment

- Configured enterprise IAM controls in Azure including RBAC roles and MFA policies.
- Secured privileged access using Azure Key Vault for secrets management.
- Documented security architecture and access control matrices.

ICS Security Lab: Network Hardening & Log Management

Sep 2025 – Dec 2025
Linux, nftables, rsyslog, Fail2Ban, Python

Security controls for industrial control systems

- Configured network segmentation and firewall rules (nftables) to isolate industrial control system components.
- Implemented centralized logging (rsyslog) and automated attack blocking with Fail2Ban.
- Simulated attacks using Python scripts to validate security controls.

Cybersecurity Labs: Network Security & Monitoring

2025
OpenVAS, Nessus, Splunk, FortiGate, Honeypots

Hands-on security tools

- Performed vulnerability assessments with OpenVAS/Nessus and generated remediation reports.
- Deployed honeypots and monitoring systems (Splunk) for attack detection.
- Configured WAF (FortiGate) and tested against common web attacks.

AI Programming: Machine Learning & Data Analysis

2024
Python, Pandas, NumPy, Scikit-learn

Implementation of ML algorithms from scratch

- Implemented machine learning algorithms (KNN, Perceptrons, Q-Learning) from scratch.
- Processed and analyzed datasets (MNIST) using Pandas and NumPy.
- Developed custom analysis tools to measure algorithm performance.

Hotel Management System – Database Design

2023
SQL, Database Design, Normalization

Relational database design with complex business logic

- Designed a normalized relational database with 8+ entities for hotel operations.
- Wrote complex SQL queries with JOINS, aggregations, and subqueries for business reporting.
- Created complete documentation including data dictionary and relationship diagrams.

Personal Portfolio Web Application

2023
JavaScript, Node.js, Express, SQLite, Authentication

Full-stack development with user management

- Built a responsive web application with user authentication and admin functionality.
- Implemented CRUD operations and RESTful API endpoints.
- Designed database schema and handled data persistence.

Network Programming: Data Processing & Automation

2023
Python, Socket Programming, Data Parsing

Automated data pipelines for log analysis

- Built automated scripts to read, structure, and analyze large volumes of log data.
- Implemented data import/export functionality between different systems.

Multiplayer Tic Tac Toe (Android)

2023
Kotlin, Android, Socket Programming

Mobile game development with networking

- Developed a multiplayer Android game with real-time game state synchronization.
- Implemented client-server architecture with custom protocols.
- Created user-friendly interface with animations and game logic.

Aires AB: Drone-Based Emergency Medical Delivery Startup

2023
Market Analysis, Financial Modeling, Strategic Planning

Business plan development for technical concept

- Conducted market and competitor analysis for drone-based medical delivery services.
- Developed financial models including cost calculations and break-even analysis.
- Created Business Model Canvas and operational roadmap.

FlexiCharge Agile Software Engineering Project

Web application development using Scrum

2023

Agile, Scrum, Team Collaboration

- Participated in agile development team for web application project.
- Contributed to sprint planning and team coordination.

iOS Apps (SwiftUI)

Mobile application development

2023

SwiftUI, iOS, Core Location

- Created iOS applications including a weather app and todo list app using SwiftUI.

EDUCATION

University West

Master of Science in Cybersecurity – (Graduated June 2026)

Trollhättan, Sweden

Aug 2025 – Jun 2026

- Courses in information security, risk management, cloud security, and compliance.
- Industrial Programming with Python – focus on automation and AI.

Jönköping University

Bachelor of Science in Software Development & Mobile Platforms

Jönköping, Sweden

Aug 2022 – Jun 2025

- Education focused on programming, databases, algorithms, and system development.
- Courses in AI programming, database design, and agile methodologies.

Katrinelundsgymnasiet

Natural Science Program

Gothenburg, Sweden

2018 – 2021

CERTIFICATIONS

Cisco CyberOps Associate – December 2025. Validated skills in SOC operations, incident response, and security monitoring.
